

November 4, 1996

SUBJECT: Intranet - QUICKFIND

BACKGROUND

The Intranet - QUICKFIND project is a new system proposal approved by Council that will be designed to provide front line staff with quick and accurate answers to many of the simple questions asked by the public.

Front line staff at the Park Board have been and will continue to be involved in the requirements gathering phase of this new system. Upon implementation, this system will be accessible not only by front line staff at the Park Board, but by all Park Board staff with access to a personal computer. This includes all community centres, which will have been connected to the City's Wide Area Network by the end of 1996, as per our initiative that was funded from the 1994-96 Capital Plan.

Funding approved for this project includes allocation for 2 new personal computers for Park Board front line staff.

Included for your information is the City Manager's report to Council dated September 14, 1996, and Council's resulting approved recommendations, dated October 11, 1996.
