

COMMISSIONER ENQUIRIES – SUMMARY REPORT

Date Received	Topic	Submitted By	Summary of request	Board Update
July 8, 2024	Beaver Lake Dredging - Update	Commissioner Digby	Following the early season dredger activity in Beaver Lake (Stanley Park), could staff please provide a report on the whether this was successful, as invasive lilies appear to be covering the lake at this time, and the outflow appears to be blocked.	In the spring of 2024 staff arranged a partial aquatic vegetation removal pilot with work completed by a specialist contractor. Water lilies have since aggressively regrown over most of the lake surface, except for an area near the outfall. Staff are considering more extensive vegetation removals and other deterrents such as partial use of geotextiles to counter the fast spread of vegetation for execution in 2025. Funding is not available for dredging or more frequent vegetation removal efforts.
